**Stereodefined Homopropargyl Amines by Tandem Nucleophilic Addition/Fragmentation of Dihydropyridone Triflates.** — A variety of synthetically valuable multifunctional homopropargyl amine derivatives is prepared via reaction of dihydropyridone triflates with BuLi. Changes in the steric or electronic effects round the periphery of the substrate do not substantially affect the outcome. — (TUMMATORN, J.; DUDLEY\*, G. B.; *Org.
