**Prins-Pinacol Spiroannulations.** — Spiro(4.5)decanones are obtained by Prins-pinacol spiroannulations from cyclohexanone precursors. The selectivity observed in the rearrangement step should allow to construct stereochemically complex spirocycles in a predictable fashion. — (MINOR, K. P.; OVERMAN, L. E.; Tetrahedron 53 (1997) 26, 8927-8940; Dep. Chem., Univ. Calif., Irvine, CA 92717, USA; EN)
