The authors realized that an error had occurred in Fig. 1H and Fig. 2. They are now reproduced correctly below. The changes in these figures do not affect the discussion and the conclusions reached in the paper.

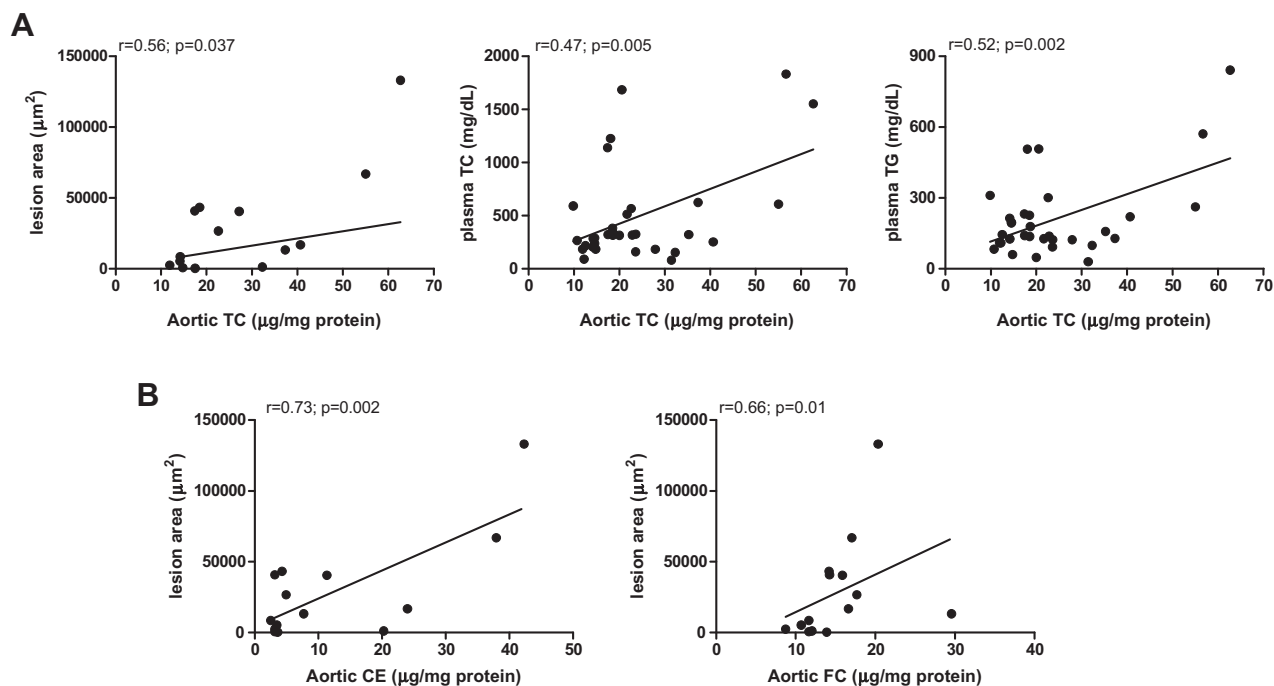

**Fig. 1.** Dietary fatty acids and the development of atherosclerosis. (H) aortic cholesterol content in whole aortas ( $n = 8–13$ ) isolated from LDLr-KO mice fed either a TRANS, SAFA or PUFA diet for 16 weeks;  $*p < 0.05$ . Data were checked for normality and transformation was performed prior to statistical analysis. One-way ANOVA followed by the *post-hoc* Newman-Keuls Multiple Comparison Test for pair-wise comparisons was performed. Results are shown as the mean  $\pm$  SEM.

**Fig. 2.** Correlations between (A) aortic total cholesterol (TC) with lesion area, plasma TC and plasma TG concentration: the aortic TC content was positively correlated with lesion area, plasma TC and plasma TG; (B) aortic cholesteryl ester (CE) and free cholesterol (FC) with lesion areas.
