

ERRATUM

C.D. Batich, Chemical derivatization and surface analysis. *Applied Surface Science* 32 (1988) 57–73.

The following sentence and reference recognizing the priority of Drs. Riggs and Dwight in XPS labeling was inadvertently omitted from the final draft submitted to this journal.

The first published results using chemical labels to identify surface groups by XPS was by W. Riggs and D.J. Dwight [*J. Electron Spectrosc.* 5 (1974) 447] from when they worked for DuPont. Their application of bromine to detect double bonds remains a prime example of the power of this method.
