

Acknowledgements

My thanks are due to all those who, in recent years, made it possible for me to develop and refine earlier ideas on urban economics and design — to the former and actual chiefs of the National Planning Department of Colombia, Roberto Arenas, Luis Eduardo Rosas and Miguel Urrutia, to all of whom I acted as adviser; and to the various agencies who made my services available to that agency — the Ford Foundation, the Canadian International Development Agency and the Banco de la República of Colombia. The Habitat section of the United Nations asked me the basic questions, the attempt to answer which led to the writing of this book; the U.N. Center for Housing, Building and Planning enabled me to revisit the larger South American cities in 1975; and the Canadian International Development Agency to visit Singapore in 1973. A United Nations—United Kingdom Seminar in 1973 permitted me to study the British New Towns. A Habitat Conference in Dubrovnik in 1975 gave me an opportunity to visit and study the new urban developments in and around Paris. My work in drafting terms of reference and sitting on Steering Committees for the various urban studies in Colombia, financed by the United Nations Development Program and USAID (some eight, of which two were supervised by the World Bank) enabled me to attempt to apply theory to the solution of actual city and site problems.

These studies were contracted with Llewelyn-Davis, Weeks, Forestier-Walker and Bor, American City Corporation, Planners Inc., Toups and Loiederman (Planning Research Corporation), Consultécnicos, Garcés and Smith, and AEI de Medellín. In the economic feasibility studies the work of John Delaplaine was invaluable. His early death, while working on the economics of a large urban project for Bucaramanga, Columbia, was not only a loss to the country but a great personal loss to me. In the course of the successive studies I maintained close contact with professionals in the National Planning Department, particularly and recently with Rafael Obregón and Luis Ricardo Paredes.

I have elsewhere (in *Ahorro, Corrección Monetaria y Construcción*, University of Los Andes, Bogotá, 1975) acknowledged my debt to the advisory group that assisted in thinking through the manifold problems of introducing an indexed savings/mortgage system in Colombia with a minimum of disturbance.

As a member of the Colombian Delegation in the various preparatory conferences for Habitat I was able to work closely with the Head of the Delegation, Virgilio Barco, who, in the course of his distinguished career, was once Mayor of Bogotá and commissioned the early 1967 study I directed, while head of the Economics Department of the National University of Colombia, on *The Alternatives for the Development of Bogotá*, in which the main thesis of the present work was set forth.

The manuscript was edited by Roger Sandilands and the Habitat Secretariat of the United Nations, to whom I express my hearty appreciation. My secretaries, Alicia de Téllez and Nydia Parra, deciphered my scrawl and met constant datelines, as various earlier drafts were prepared for regional conferences.

LAUCLIN CURRIE

Bogotá July 1975
